# Data Analytics in Action: RailSmart

Tristan Reed, Research Associate – Curtin/PATREC

Department of  
Transport

PATREC

# Outline

- Background
  - What is PATREC?
  - What is RailSmart?
- Methodology
  - Travel Behaviour Analysis
  - Accessibility Tool
  - GIS Analysis
- Link to Dashboard and Questions

# What is PATREC?

- The **Planning and Transport **Research Centre**
  - *“a collaboration amongst the University of Western Australia, Curtin University, Edith Cowan University, Department of Transport, Main Roads Western Australia and the Western Australian Planning Commission”...*
  - *“to conduct collaborative, applied research and teaching in support of policy in the connected spaces of transport and land use planning.”***
- Many PATREC projects involve the analysis of large datasets from sensor networks – e.g. road traffic counters, SmartRider gates, bus location data – to generate insights from existing data for decision makers or to generate predictive models to ensure the efficiency of networks into the future.

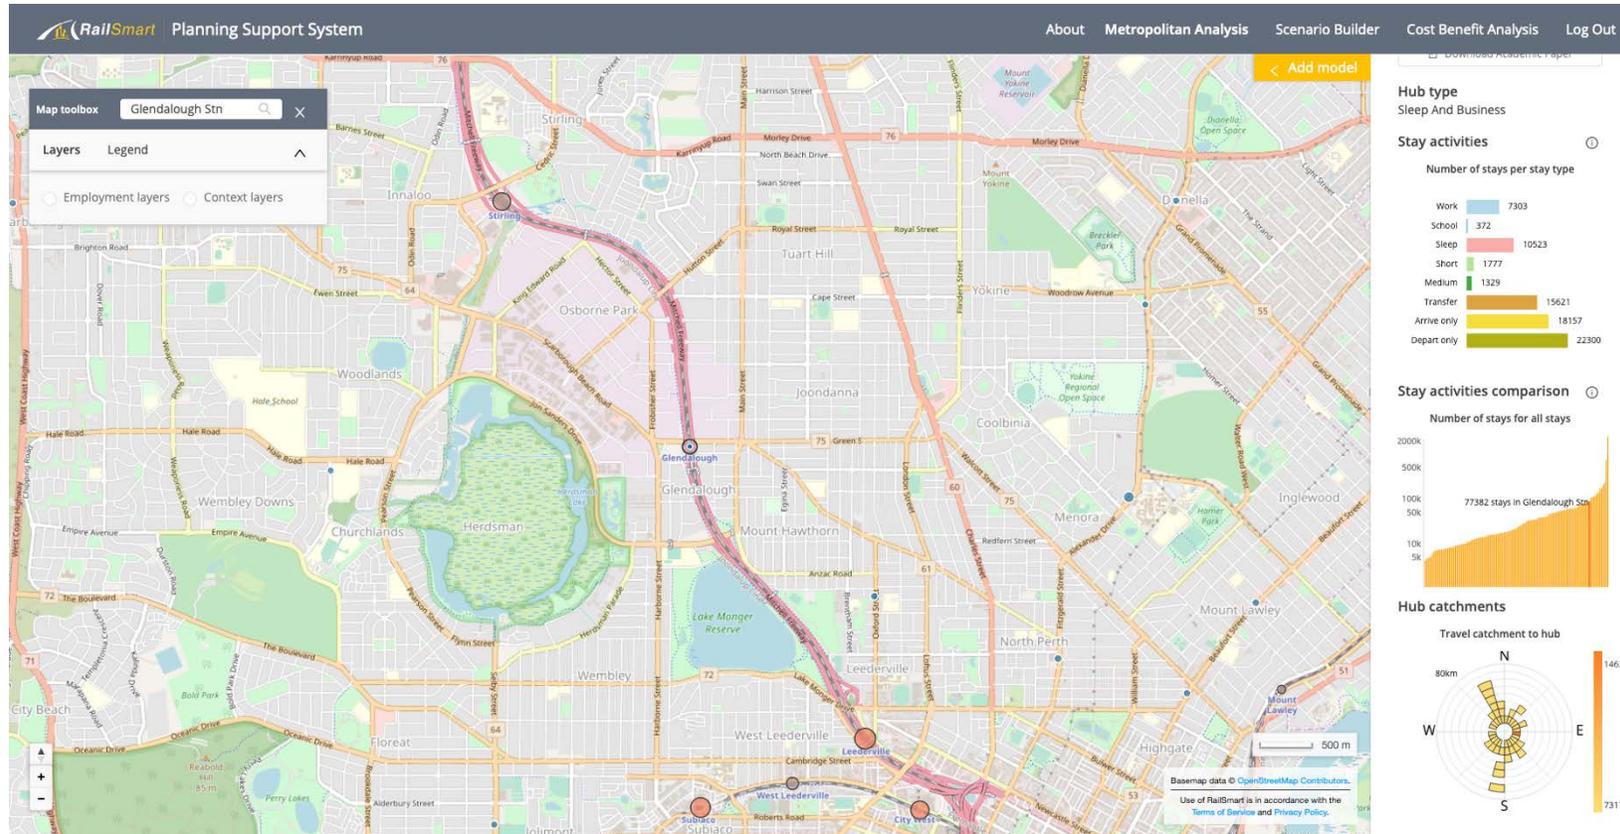

# What is RailSmart?

- PATREC applied for (and was granted) funding from the *Smart Cities and Suburbs Program* with partners City of Wanneroo and Department of Transport.
  - Proposal was to develop a dashboard which operationalises analysis and modelling previously completed by PATREC and applies it to the precincts surrounding the Yanchep Rail Extension of METRONET.
  - Hence, despite the name RailSmart it is really ‘PlanSmart’.
- A total of six tools were developed for the system, some of which we will explore now.

# Travel Behaviour Analysis

- Cardell-Oliver & Povey (2018) published an analysis regarding the data mining of SmartRider (public transport fare card) data, used to identify and typify ‘hubs’ within the Perth metropolitan area.
  - A ‘hub’ is considered a group of stops that has attracting characteristics;
  - This was determined by analysing ‘stays’; this is the time between finishing a journey and starting a new one.
  - While many hubs were railway stations, some of the most popular hubs were only serviced by bus (e.g. UWA in Crawley, QEII in Nedlands).
  - Not only did this analytics enable the identification of the hubs, it also helped determine how they were used – workers, residents, students, visits.

# Travel Behaviour Analysis

# Accessibility Tool

- Sun et. al. (2017) devised a methodology to determine accessibility between zones (spatial regions/areas) using a combination of bespoke programming and COTS tools.
  - Uses both STEM model matrices and public transport timetables.
  - Allows comparison between modes and times-of-day.
  - Cross-referenced to Census data (how many jobs?).
  - Possible extensions to consider “DIY” routing (using existing tools and congestion data).

# Accessibility Tool

**RailSmart Planning Support System**

Map toolbox: Warwick Stn

Layers: Employment layers, Context layers

Map controls: +, -, 5 km scale bar

Basemap data © OpenStreetMap Contributors. Use of RailSmart is in accordance with the Terms of Service and Privacy Policy.

**Instructions**  
To show model outputs, select control parameters then click 'Run Model'.

**Model Parameters**

- Travel time (minutes): 30, 60, 90, 120
- Travel mode:  PT,  PV
- Travel period:  AM,  PM
- Travel direction:  Inbound,  Outbound
- Accessibility metric:  Jobs,  Population,  Dwellings

**Accessibility comparison**  
825,838 Jobs accessible within 120 minutes travelling outbound.

Bar chart showing Accessibility score for Warwick Stn (approx. 800k jobs).

**Accessibility score**  
74% of jobs in Perth Metro Accessible

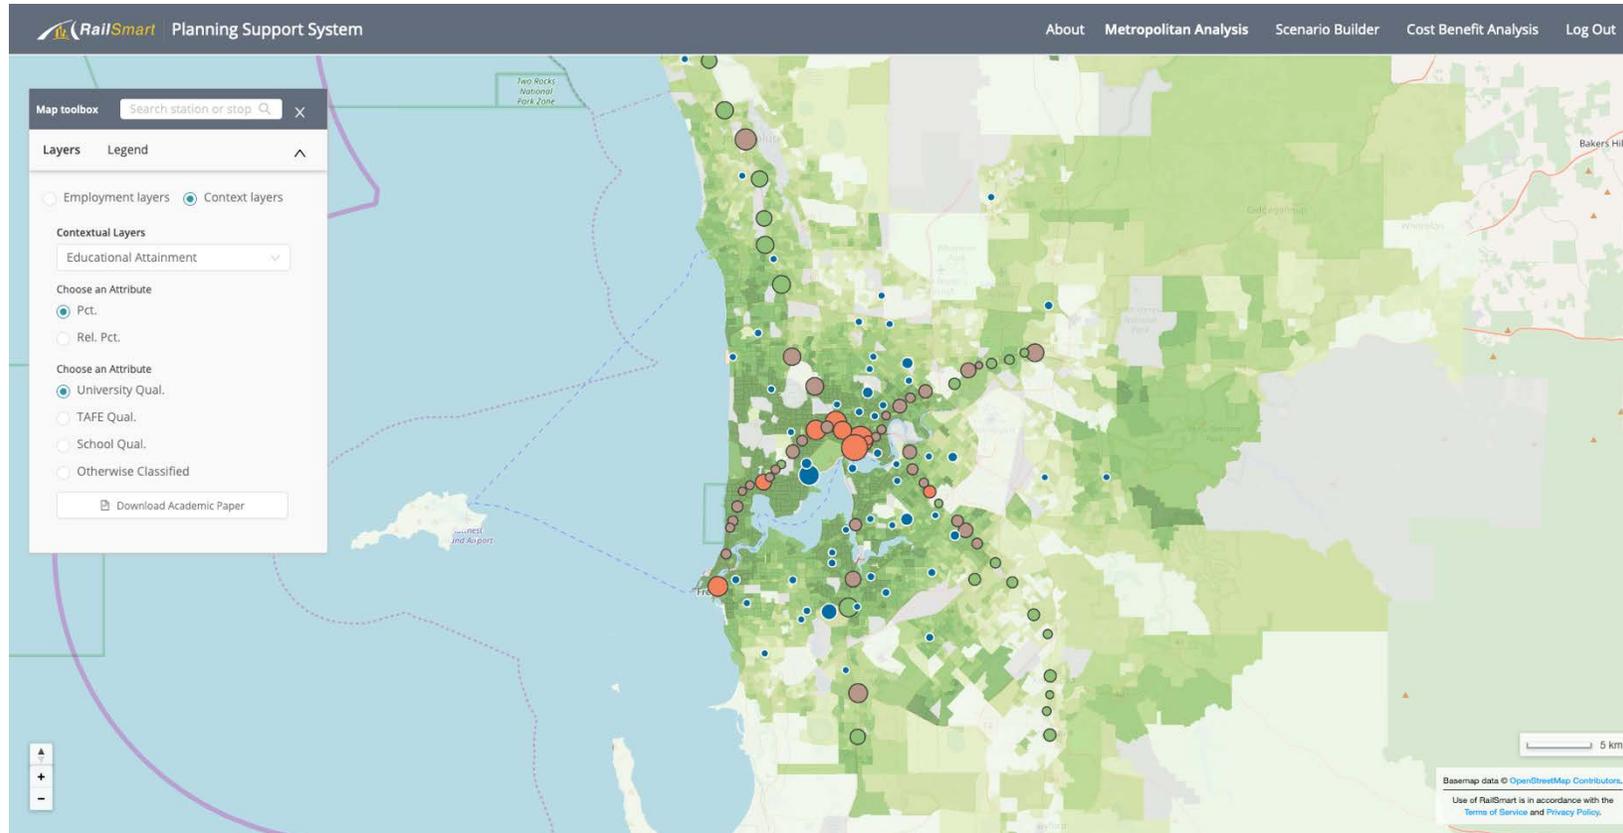

PATREC

# GIS Analysis

- Reed (2019) described a method to automation to extraction of descriptive analytics from ABS data and allow the dynamic manipulation of layer attributes within a Web dashboard.
  - Each layer can be manipulated to combine and 'pivot' attributes.
  - Generation of each layer is automated as far as practicable.
  - Uses a web service that 'splits' GeoJSON into attribute data and spatial data (sounds like Shapefiles...)

# GIS Analysis

# Check it Out!

- Free to register at <https://railsmart.patrec.org/>.
- Not a one-shot but a base for future research.

## Questions?
